***Schur Packaging Systems at World Publishing Expo 2017
Think Outside the Box - Jointly Achieve Higher Profitability -***

At this year's World Publishing Expo in Berlin Schur focuses on a topic that has always been and will always be important for modern companies – to become and remain economical. Schur Packaging Systems will present systems and tools that can support printing companies to optimize their production and avoid unnecessary costs. The solutions for this are as varied as the prerequisites and requirements.

Returned Product System – Avoid Costly Overproduction

Schur will present the RPS, a system that has been specifically developed for printing houses whose distribution is mainly handled through resellers. By using intelligent technology can unsold copies, which are sent back from the reseller to the printing houses or distribution centers, be reliably sorted and registered. In this way the RPS helps to avoid costly overproduction and to spare valuable resources.

High-Speed Palletizing Solutions – Increased Productivity and Improved Ergonomics

To automate this part of the delivery process has become more and more interesting for many companies in all types of industries. The automated high-speed palletizing solutions from Schur are the right tool to make this process more productive and reliable. But also the demands on an ergonomic working environment for the employees are steadily increasing. The Schur palletizing solutions create the right conditions to meet these requirements.

Constant Care – Count on Us!

Never before has the topic "Preventive Maintenance" been so important for printing companies as with today's market situation. **COUNT ON US!** During the World Publishing Expo Schur will present how the Schur Condition Monitoring Concept can support the printing houses to achieve higher cost-effectiveness in their productions and how tailor-made retrofit kits can help to meet all actual requirements and standards.

Welcome to visit us in hall 22a, stand F16.
