Press Release

January 2012

//wifag replaces ABB controls on OF370 press for Suomen Lehtiyhtymä Oy, Finland

The success of the //wifag automation solutions for the newspaper production industry continues with the order to replace the existing command and control console.

The media group Suomen Lehtiyhtymä Oy in Finland, has ordered a command retrofit for its existing OF370 printing press which includes a new control console as well as a new //wifag softproof solution to enhance quality control for their printing center in Hämeen Lehtipaino Oy, Hämeenlinna, Finland.

The replacement of the existing system will allow the customer to have a consistent and coherent command system for the whole press line. This cost-efficient investment prolongs the useful life of the press and makes a decisive contribution to efficiency and the operator friendliness.

The new systems will be commissioned in the course of 2012.
